Experiment 6

Workflow Automation Layer for the Student Admission Enquiry Application

Aim

To design and build a complete automation layer in Zoho Creator for the existing "Student Admission Enquiry" application, demonstrating the correct usage of all eight Workflow options in Zoho Creator: Form Workflows, Schedules, Approvals, Payments, Blueprints, Batch Workflows, Report Workflows, and Functions.

Procedure

1. On_Enquiry_Submit_Workflow (Form Workflow): fires when a record is added; emails the applicant their Enquiry ID and next steps, and notifies the Admission Cell.
2. Daily_Counselling_Reminder_Schedule (Schedule): runs every evening and reminds applicants with a session the next day, with venue, reporting time, and document checklist.
3. Scholarship_Waiver_Approval (Approval): only applicants above the scholarship threshold need Dean/Admission Head approval before the waiver is applied.
4. Application_Fee_Payment_Workflow (Payments): generates a payment link from Net_Application_Fee_Payable, updates Fee_Paid_Status on success, and flags failures for follow-up.
5. Admission_Lifecycle_Blueprint (Blueprint): restricts each stage transition to specific roles and gives an auditable trail.
6. Bulk_Admission_Confirmation_Batch (Batch Workflow): notifies the newly admitted cohort in batches to avoid timeouts.
7. OnEdit_Recalculate_NetFee_Workflow (Report Workflow): keeps Net_Application_Fee_Payable accurate when the scholarship percentage is edited in the report grid.
8. Generate_AdmissionLetter_Function (Function): a reusable Deluge function called on status change to Admitted, from a resend button, or from the batch workflow.

Output Screenshots

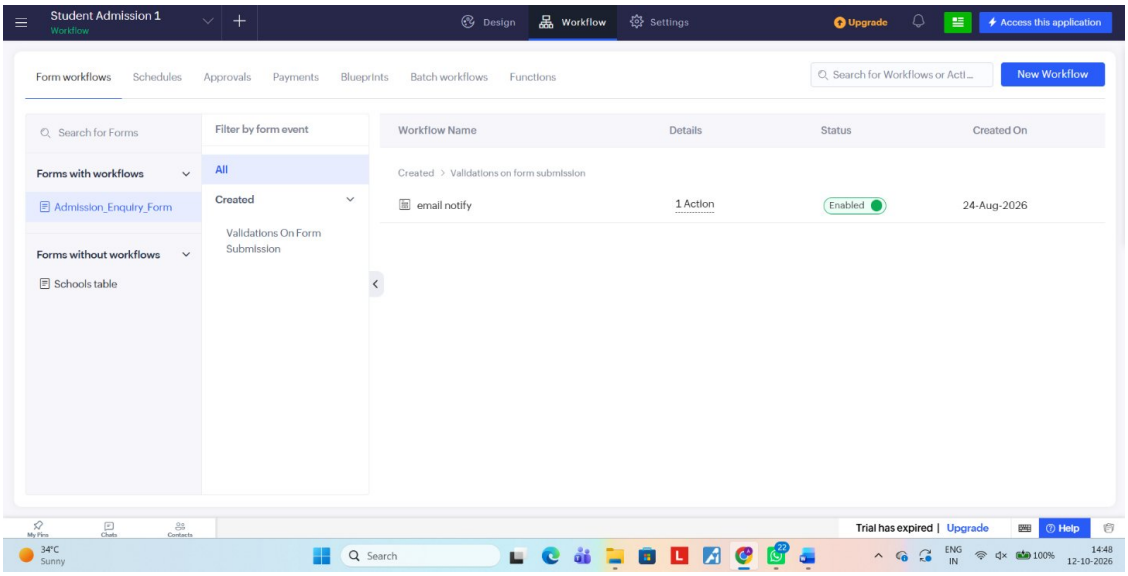

Figure 1: Form workflows tab: "email notify" workflow on Admission_Enquiry_Form (enabled).

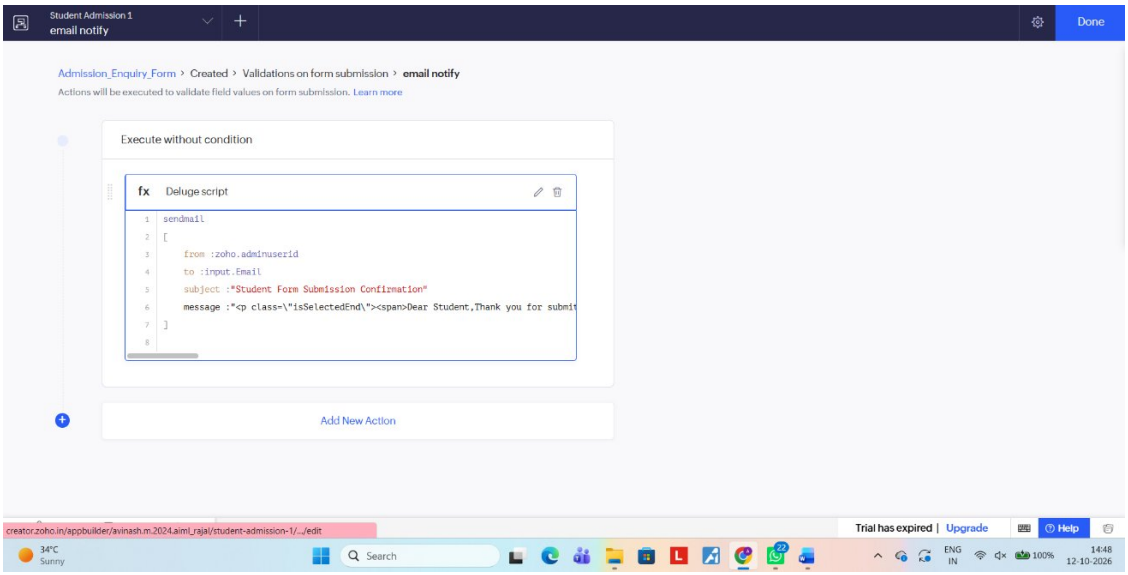

Figure 2: Deluge sendmail script for "email notify".

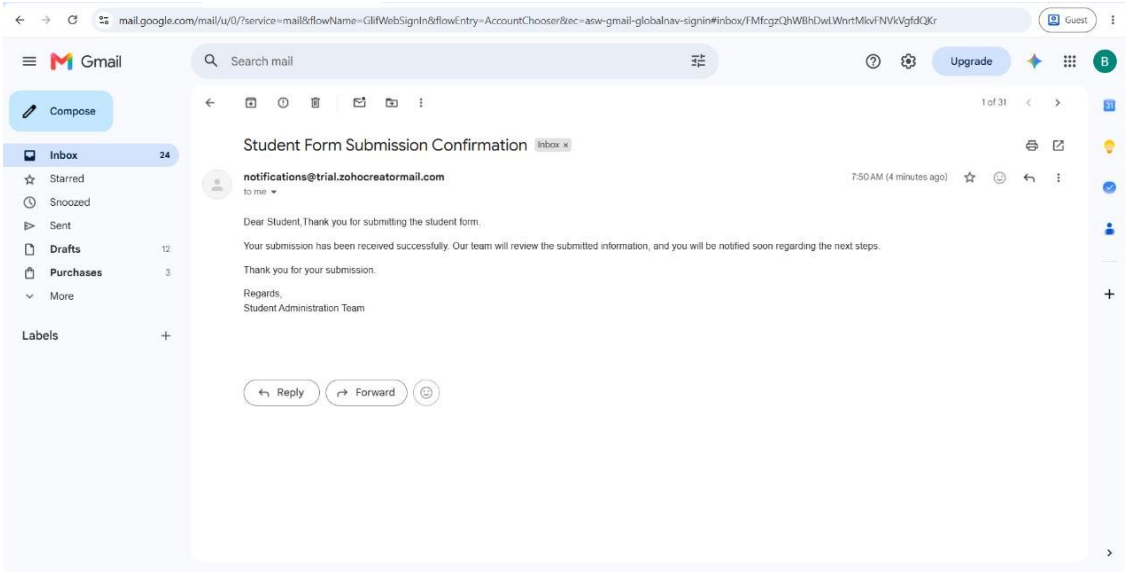

Figure 3: Gmail: "Student Form Submission Confirmation" email.

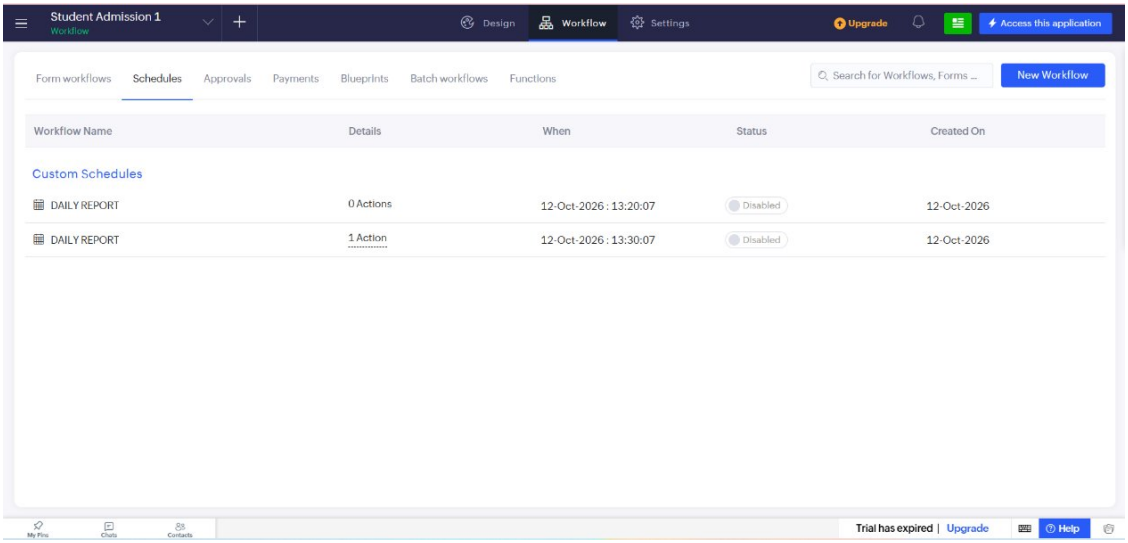

Figure 4: Schedules tab: two "DAILY REPORT" schedules (both disabled).

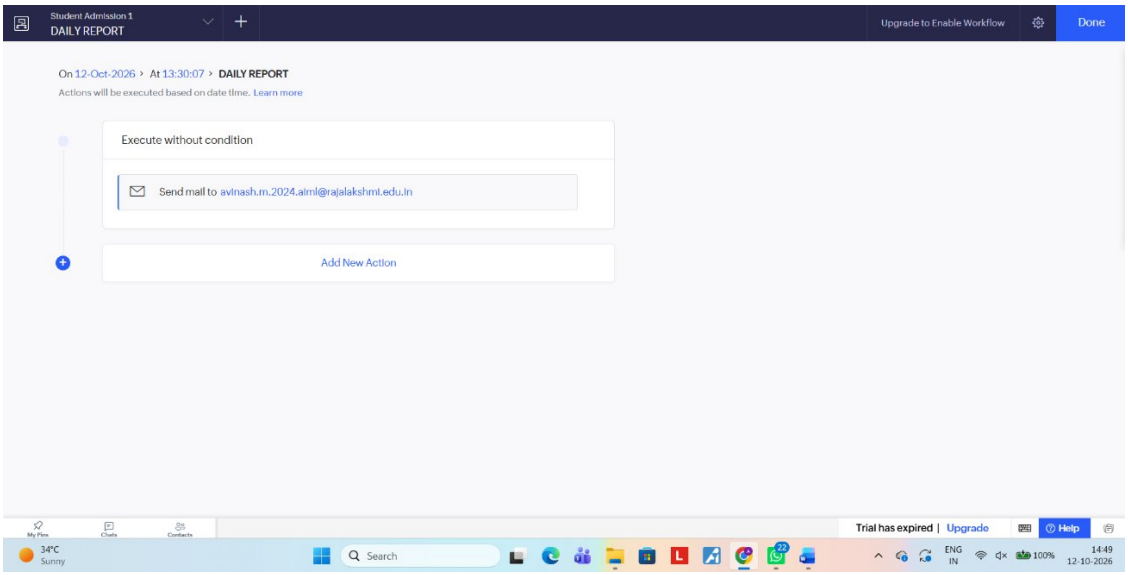

Figure 5: Schedule action: Send mail to an institutional address.

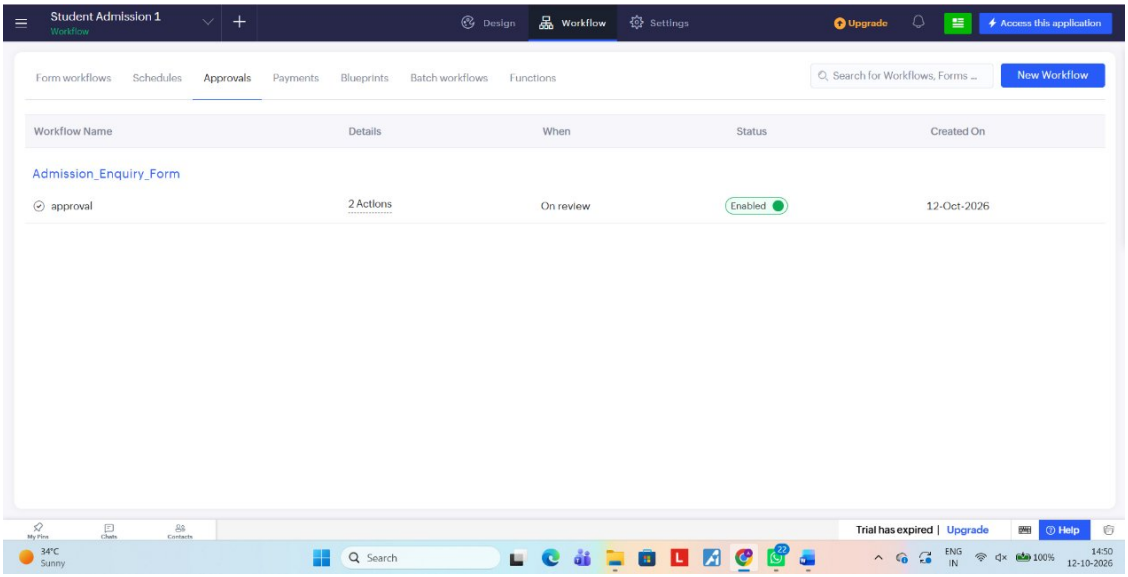

Figure 6: Approvals tab: "approval" workflow (2 actions, enabled).

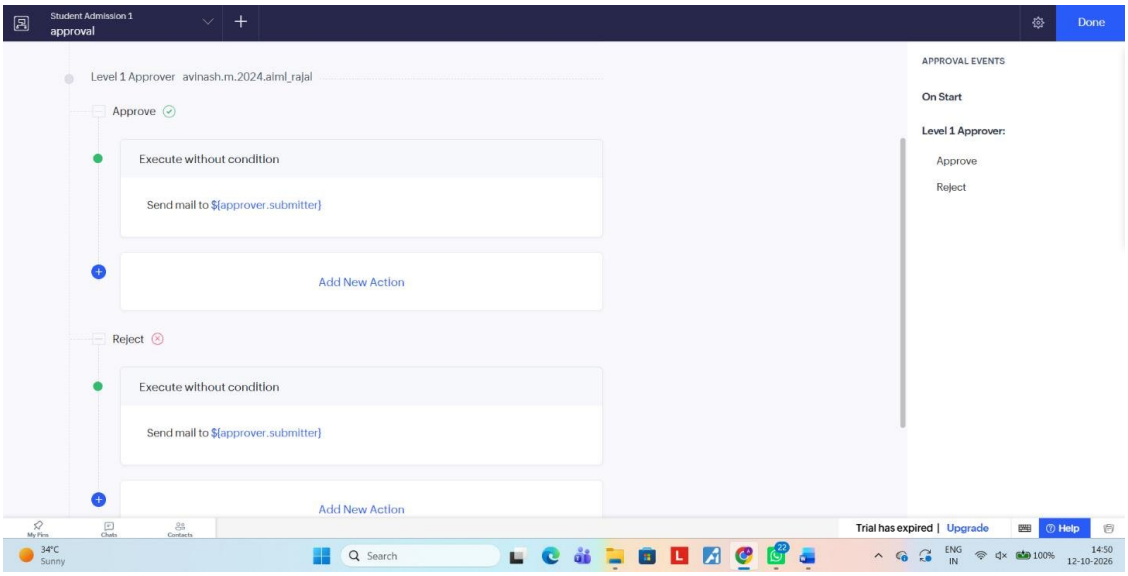

Figure 7: Approval detail: Level 1 approver with Approve and Reject send-mail actions.

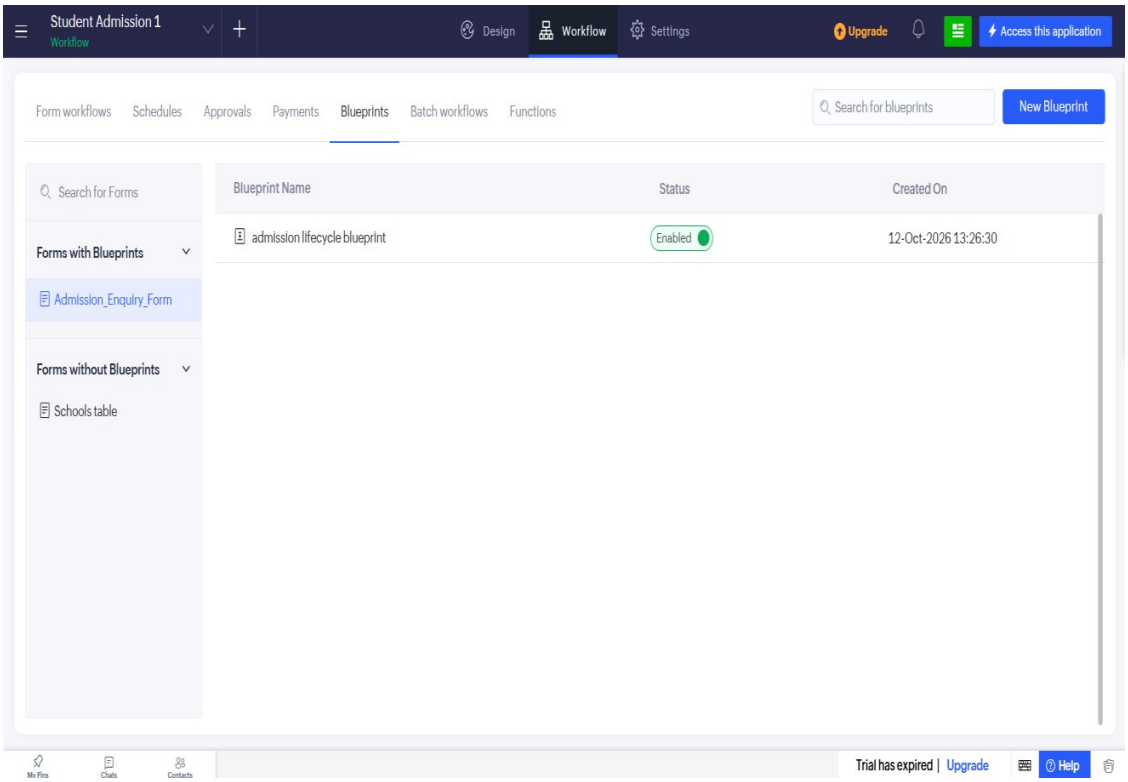

Figure 8: Blueprints tab: "admission lifecycle blueprint" (enabled).

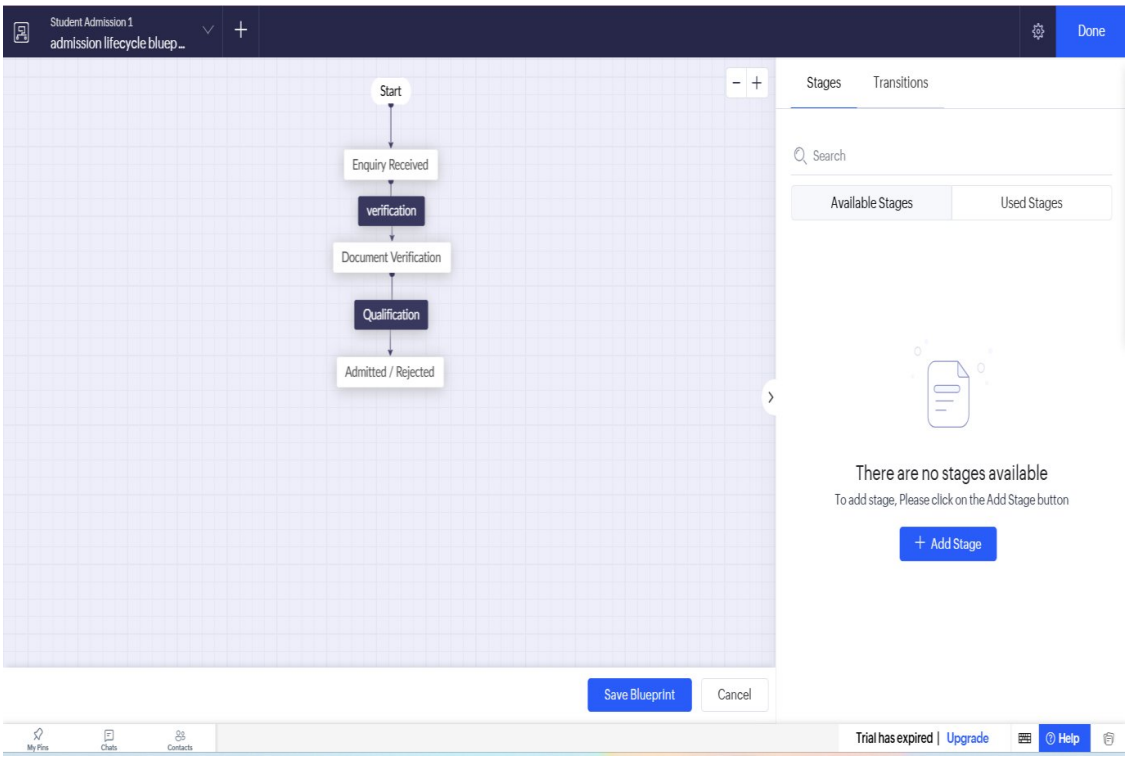

Figure 9: Blueprint canvas: Enquiry Received, Document Verification, Admitted / Rejected.

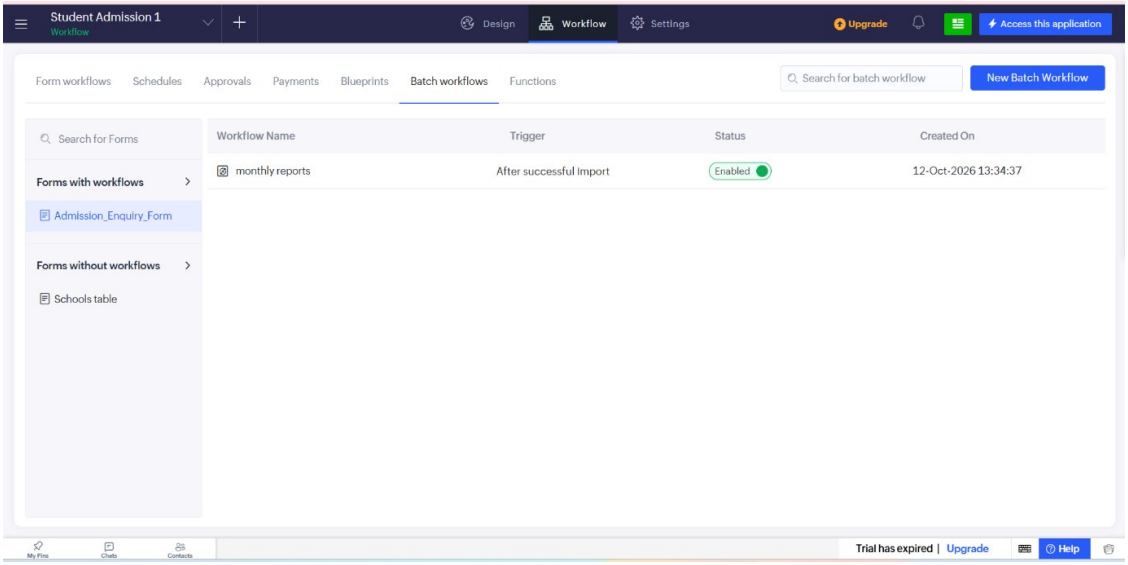

Figure 10: Batch workflows tab: "monthly reports" (trigger: After successful Import).

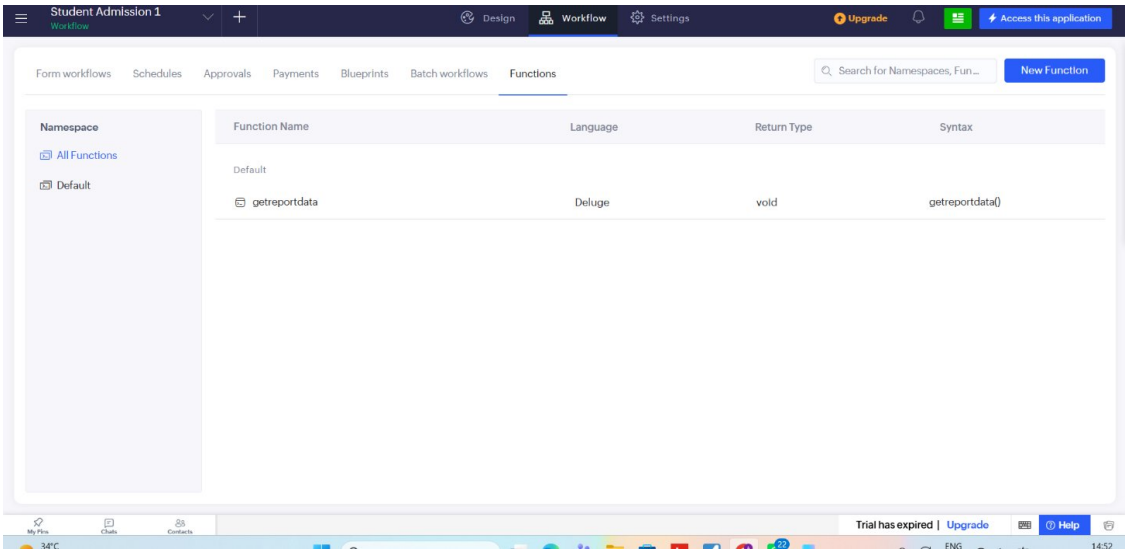

Figure 11: Functions tab: "getreportdata" (Deluge, void).

Missing Evidence

- Payments: no screenshot. Experiment 13 shows the Payments tab requires an account upgrade, so this was not configured.
- Report Workflow: no screenshot of OnEdit_Recalculate_NetFee_Workflow.
- Schedule: the screenshots show "DAILY REPORT", not Daily_Counselling_Reminder_Schedule, and both are disabled.
- Batch workflow: "monthly reports" is shown, not Bulk_Admission_Confirmation_Batch.
- Function: "getreportdata" is shown, not Generate_AdmissionLetter_Function.
- Form workflow: the screenshot shows "email notify" under Validations on form submission, a generic confirmation without the Enquiry ID.

Result

A complete automation layer in Zoho Creator for the existing "Student Admission Enquiry" application is created.
