Experiment 7

API Integration with Zoho Creator

Aim

To integrate Zoho Creator with external applications and services using Application Programming Interfaces (APIs) to enable secure data exchange, automate business processes, and extend the functionality of the Student Admission Management System.

Theory

API integration allows applications to communicate and exchange data with external systems, enabling developers to retrieve, create, update, and manage records between applications.

Procedure

1. Log in to Zoho Creator and open the Student Admission application.
2. Identify the external application or service to integrate.
3. Configure the required API access and authentication settings.
4. Generate or configure the necessary API credentials and permissions.
5. Use supported API requests or Deluge functions to send and receive data.
6. Configure the request URL, HTTP method, headers, and required parameters.
7. Test the API integration and verify that data is exchanged correctly.
8. Handle errors and validate responses to ensure reliable operation.

Applications of API Integration

- Connecting Zoho Creator with external databases and applications.
- Sending automated email notifications.
- Synchronizing student admission records.
- Integrating payment gateways or document verification services.
- Retrieving external data for reports and dashboards.

Output Screenshots

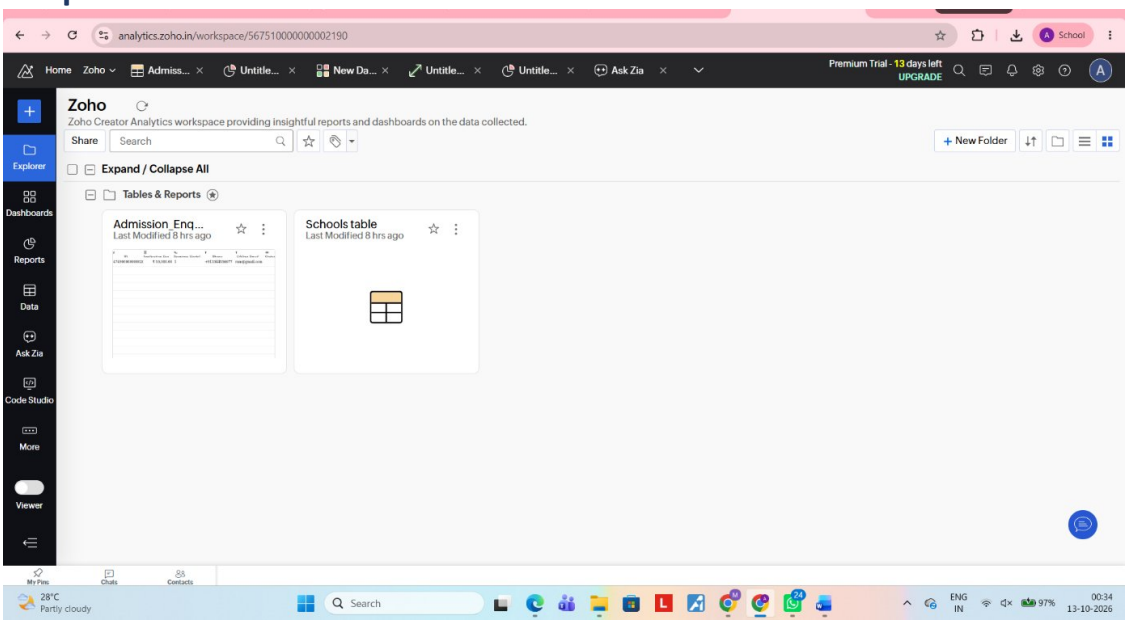

Figure 1: Zoho Analytics workspace showing Admission_Enquiry_Form and Schools table.

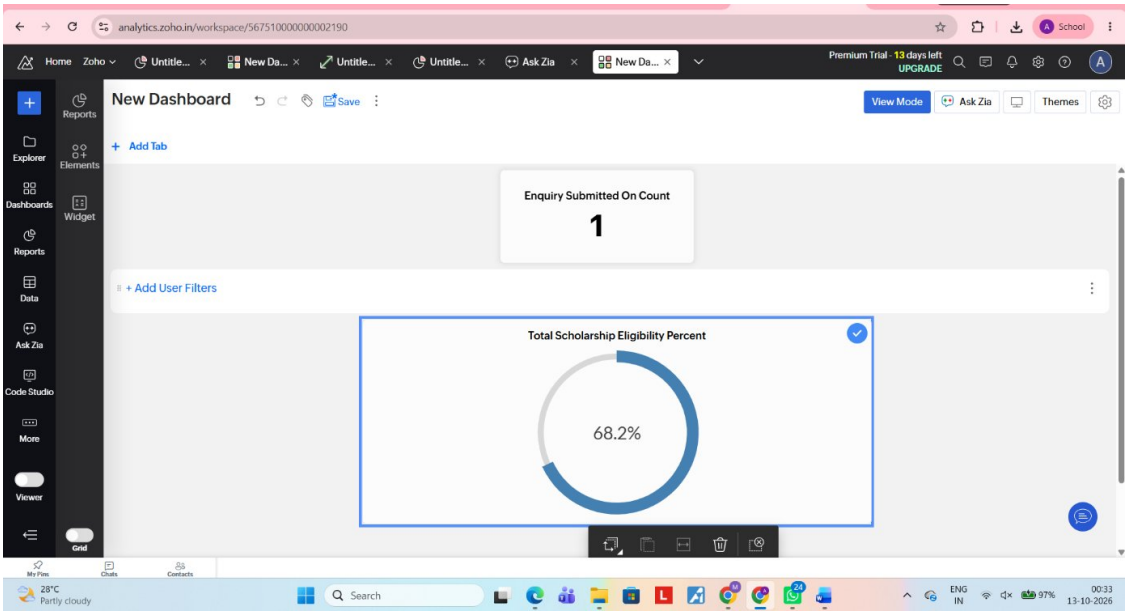

Figure 2: Dashboard: Enquiry Submitted On Count (1) and Total Scholarship Eligibility Percent (68.2%).

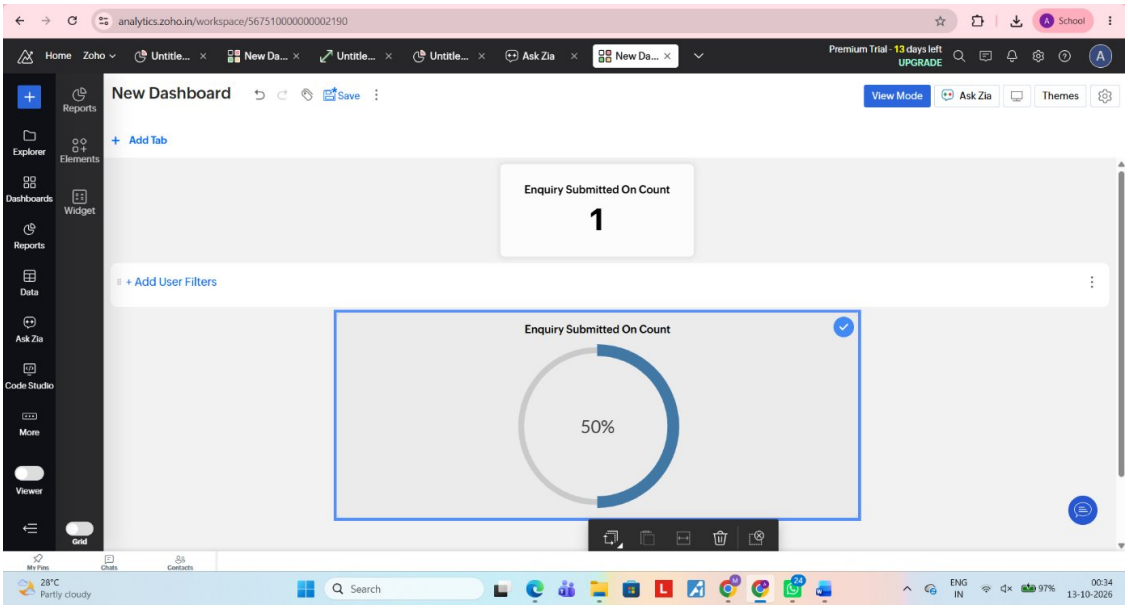

Figure 3: Dashboard widget at 50%.

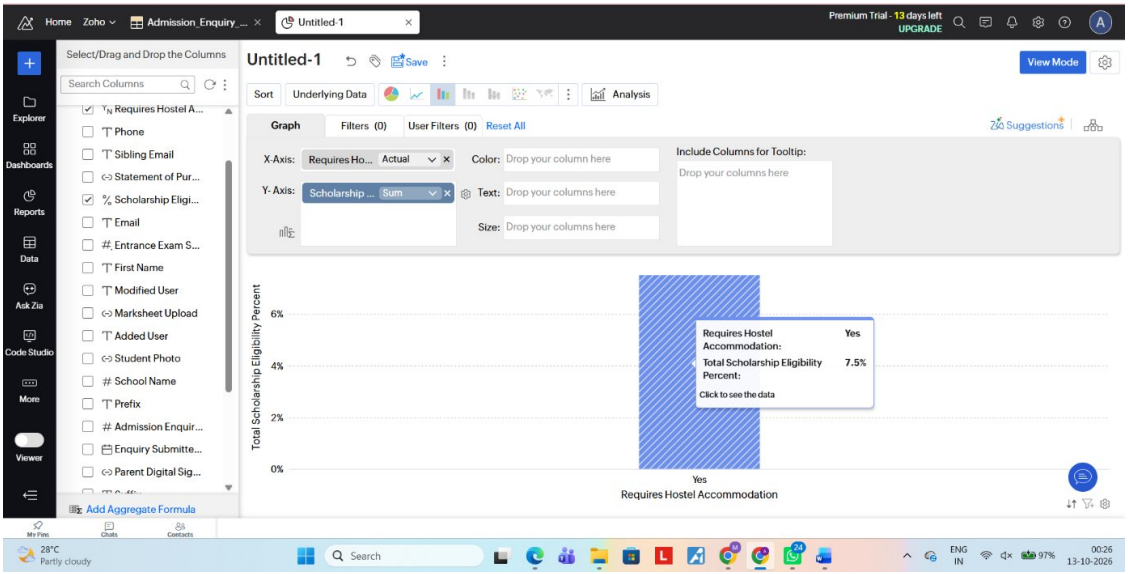

Figure 4: Column chart of scholarship percent by hostel requirement.

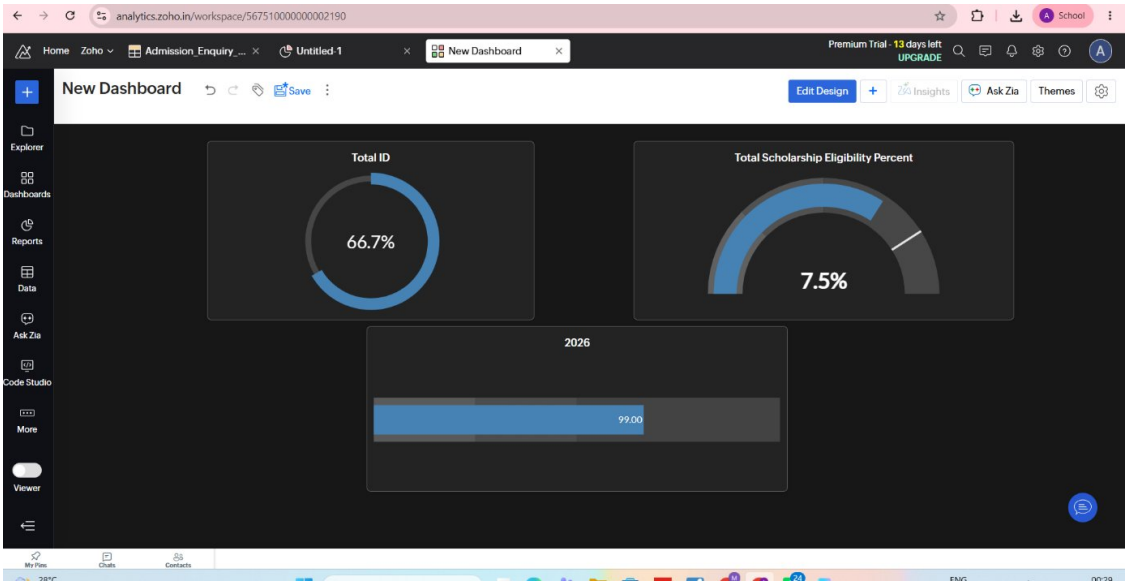

Figure 5: Dark-theme dashboard: Total ID, scholarship gauge, entrance score bar.

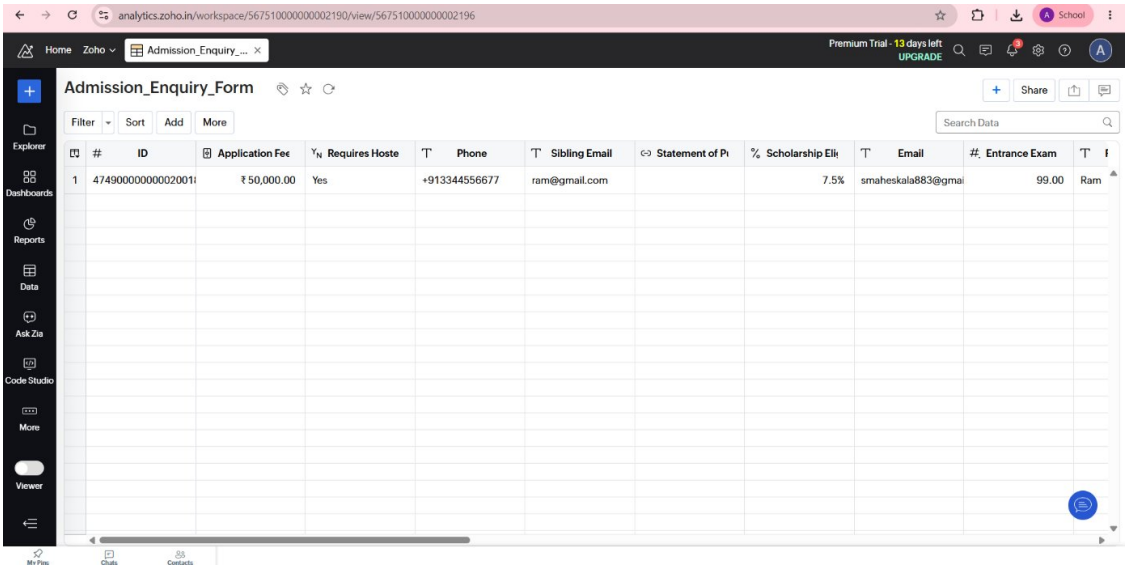

Figure 6: Admission_Enquiry_Form data table in Analytics.

Missing Evidence

- No screenshot or code shows an API request, credentials, a connection, a Deluge invokeUrl call, or a response from an external service. The screenshots show the Zoho Analytics integration only.
- The percentages shown (68.2%, 66.7%, 50%) are not consistent with each other or with the single record in the data table, and the source gives no explanation.

Result

The source has no Result section, only a Conclusion: API integration in Zoho Creator enables seamless communication between applications and external services. It supports data exchange, workflow automation, and improved operational efficiency. By configuring APIs with appropriate authentication, validation, and error handling, developers can build more flexible and connected applications.
