Experiment 12

Security and Governance in the Student Admission Application

Aim

To implement security and governance in the Student Admission application using role-based access control, user permissions, data protection, and workflow restrictions to ensure that student information is accessed only by authorized users.

Procedure

1. Open the application: Log in to Zoho Creator and open the Student Admission application.
2. Create user roles: Define roles such as Administrator, Admission Cell Head, and Student.
3. Configure permissions: Assign suitable permissions to each role for viewing, adding, editing, and deleting student records.
4. Restrict data access: Configure report permissions and record-level access rules to protect confidential student information.
5. Secure forms: Make essential fields mandatory and validate user inputs to prevent incomplete or invalid submissions.
6. Configure authentication: Use the available authentication settings to ensure that only authorized users can access the application.
7. Protect workflows: Review Deluge scripts, email notifications, and integrations to prevent unauthorized data access or unintended actions.
8. Audit application activity: Use available audit logs and monitoring features to review important changes and investigate suspicious activity.
9. Test security: Log in using different user roles and verify that each user can access only the features and records permitted by their assigned permissions.

Result

Security and governance are implemented in the Zoho Creator Student Admission application by configuring user roles, access permissions, data validation, and activity monitoring.
