Experiment 3

Survey Report on Emerging Trends in Low-Code Application Development

Aim

To study and analyse the emerging trends in low-code application development and understand their impact on modern software development.

Theory

Low-code platforms are continuously evolving. The major emerging trends covered in the source are:

- Artificial Intelligence (AI) integration: code suggestions, workflow automation, chatbots, and predictive analytics.
- Citizen development: non-technical users building business applications.
- Cloud-native development: easy deployment, scalability, and remote collaboration.
- Business process automation: streamlining repetitive tasks through workflows.
- Cross-platform development: build once, deploy to web and mobile.
- API and third-party integration: connections to databases, cloud services, and enterprise applications.
- Enhanced security and governance: role-based access control, encryption, audit logs, and compliance features.
- DevOps and continuous deployment: CI/CD integration for faster testing and updates.

Procedure

1. Study the concept of low-code application development.
2. Identify popular low-code platforms and their key features.
3. Collect information on the latest trends from reliable sources such as research papers, industry reports, and official documentation.
4. Analyze trends such as AI integration, citizen development, cloud computing, automation, API integration, and security.
5. Compare the benefits and challenges associated with each trend.
6. Record the observations and summarize the findings.
7. Prepare the survey report based on the collected information.

Result

The survey revealed that low-code application development is rapidly evolving with trends such as AI-assisted development, cloud-native platforms, citizen development, business process automation, API integration, and enhanced security. These advancements are improving development speed, reducing costs, and enabling organizations to build scalable applications more efficiently while supporting digital transformation initiatives.
